WORKING PRINCIPLE >

DL-808D diode laser hair removal comes with 808nm wave laserstack or 755+808+1064 tripe wave laser stack with semicon.ductors technology

Applicator will emit a laser beam

The laser beam is absorbed by hair follicle melanin.

After absorption, the laser energy will be converted into heat energy.

Hair follicles and surrounding stem cells lose their activity and all off

So reach hair removal effect.

What is the Trio wavelength diode laser ?

Trio wavelength diode laser proprietary hair removal innovation is clinically proven method of laser hair removal that is virtually painless, and it is the safe laser hair removal method for all skin types, including dark and tanned skin. Its unique gradual heating and rapid/fast pulse delivery method effectively damages the hair follicle and hinders re-growth, while preventing injury to the surrounding tissue.

Theory

The principle of diode laser hair removal treatment is based on selective photothermal decomposition. The melanosomes in the hair follicle can selectively absorb the energy of the laser. The laser energy emitted by the machine is easily absorbed by the colored hair follicle without damaging the epidermal tissue. The energy emitted by the laser is absorbed by the hair and the pigment in the hair follicle.

It is converted into heat, thus increasing the temperature of the hair follicle. When the temperature rises to a certain level, the hair follicle will be irreversibly damaged, and the hair will lose its original environment and be completely removed.

Technical specification

Model Name	iMED Andriod
Machine Power	3000W
Laser Stack Power	2000W
Diode EnergyDensity	1-150J/cm ²
Spot Size	16*24mm ² / ϕ 6mm
Frequency	1-10Hz
Electrical Requirements	110/230VAC, 15/20A max,
Display	13.3" HD Android screen
Net Weight	28KG
Dimensions	30*50*40cm
Stand-by Working	Continuously 24 hours

About us

After-sale Service

2 years warranty available (2 + 1 charge) ex factory under normal and proper operation; free labor and material but without consumables parts.

Why 2+1 years warranty? (7 Simple Reasons)

1. Normally almost all the medical and aesthetic lasers with only 5 years lifespan, while the first 3 years' guarantee and full maintenance are right the key points.
LaserTell offers 2 years standard warranty and 1 year extension warranty. (Free-2, charge-1)
2. Lifelong Service (no matter 3 years or 5 years, or more...)
3. LaserTell, similar to a local service provider, has a full complement of certified technicians and engineers to assist you with all of your repair and maintenance needs, offering you faster service at much lower prices than the manufacturers
4. 24 hours + 7 days after-sale service and technical supports
5. Service Manual and Safety Instructions available
6. There is a comprehensive training last for 5-7 days in our factory and clinics, including how to operate, maintain and adjust the treatment parameters for different treatments, etc
